

WEBSITE TRAFFIC SOURCES REPORT

Submitted By

Name:MEHA MARY SAMUVEL

Domain: Data Analytics

1. Introduction

Website Traffic Sources is a data analytics project used to analyze website visitor traffic from different platforms such as search engines, social media, direct visits, and referrals. The project helps understand user engagement and traffic behavior using charts and graphs.

2. Objective

The main objective of this project is to analyze website traffic sources and visualize visitor trends using data analytics techniques. The project helps understand traffic distribution, daily visitor count, and device usage patterns through graphical analysis.

3. Tools Used

- Python
- Pandas
- Matplotlib
- Google Colab

4. Dataset Used

A custom website traffic dataset was created in CSV format. The dataset contains:

- Date
- Traffic Source
- Visitors Count
- Device Type

5. Steps Performed

Step 1: Data Loading

The CSV dataset was loaded using Pandas.

Step 2: Data Cleaning

- Checked missing values
- Converted date column
- Verified dataset structure

Step 3: Data Visualization

The following charts were created:

- Website Traffic Sources Pie Chart
- Daily Website Visitors Graph
- Device Type Analysis

6. Charts Included

- Traffic Source Distribution
- Daily Visitors Line Graph
- Device Type Bar Graph

7. Observations

- Google generates higher website traffic.
- Mobile users visit the website more frequently.
- Daily visitors vary across dates.
- Social media platforms contribute significant traffic.

8. Conclusion

The project successfully analyzed website traffic data using visualization techniques. The analysis helps understand visitor behavior and improve website traffic management.
